About Stepsmart

We've each been through the exact confusion students face when trying to break into PM: no structured starting point, unclear resources, and no easy way to validate if they're even on the right track. As alumni who've made that transition ourselves, we wanted to bring back what we wish we'd had: a clear, structured session before placement season hits, rather than students piecing it together last-minute from scattered YouTube videos and casebooks.

The Success Story

Nishant Sinha • 1st

Product Intern @Surepass Technologies | Building 0-to-1 | Product ...
1mo •

From zero interview calls to landing a PM Internship at Surepass Technologies in under a month.

A few weeks ago, I couldn't even get a callback. I did not lack the skills but I didn't know how to position myself as a PM on paper. My resume read like a student's, not a product thinker's.

One session changed that. After a mentorship session with [SanketKumar Katore](#), I restructured how I presented my thinking, my projects, and my intent. The calls started coming in.

Then came the harder part: the interviews. I was competing against people with actual industry experience, switching into product. Every round felt like walking into a room where everyone else belonged more than I did.

But I kept going. Round after round, across multiple companies, I refined how I spoke about problems, users, and decisions. Each rejection taught me something. Each round made me sharper.

And then Surepass Technologies said yes.

This isn't just about the role. It's about learning that positioning and confidence are skills too and they can be built.

The first step was the hardest. Everything else followed.

TESTIMONIALS

Real journeys. Real growth. Real impact.

MINDSET SHIFT

The moment live sessions shifted from mentors to mentees was the real turning point. Watching peers articulate product thinking out loud and realising I could do the same was when I genuinely believed I could become a PM.

Gauri T.
SDET → PM

APPLIED LEARNING

After learning the frameworks, I started applying them to my actual work not just in theory. I now think in complete systems: how each team connects, how business goals tie to product decisions. That shift in thinking has changed how I show up at work every day.

Riya
PMT → PM (Bajaj)

REAL IMPACT

PM-X gave me the clarity and confidence I needed to make a successful transition. The resume repositioning, mock interviews, and mentor feedback were invaluable. I went from a Business Analyst to PM at Acko – dream I wasn't sure was possible.

Triya
BA (Barclays) →
PM (Acko)

INTERVIEW PREP

"Before PM-X, case studies felt overwhelming I didn't know where to start. PM-X helped me break them down into clear, actionable chunks. That structure is what helped me land my first PM role."

Nishta
Data Scientist →
PM (Amex)

Learn. Apply. Grow.

A clear path to becoming
a confident Product Manager.
